

Mauritiana (Linnaeus, 1758). Location: S.E. Shore Oahu, Hawaii. Grade: F+++ Size: 91.9mm. Notes: This Cypraea(Mauritia)Mauritiana's was self collected on a night dive 5-7ft crawling on the sidewall of a very large rock formation out in the open. This Humpie is impossible to really describe and I will let the pictures to the talking for this WONDER OF NATURE, but I will say it has been around for a long time and is UNREAL THICK AND HEAVY AND IS ONE OF A KIND, very UNIQUE.
