

Mauritiana (Linnaeus, 1758). Location: S.E. Shore Oahu, Hawaii. Grade: F+++ Size: 102.7mm. Notes: This Cypraea(Mauritia)Mauritiana's was self collected on a night dive 5-7ft crawling on the sidewall of a very large rock formation out in the open. This Humpie is EXTRA DARK and overpatterned over the whole shell, and it has that AMAZING PURPLE hued spots, it has a few issues here and there but this one is just WOW.
