

**Cypraea mus donmoorei**, *Petuch, E.J., 1979*

**Rare size! Super MONSTER! 67.8 mm !!! F++/Gem**

**Venezuela. Monster sized. A highly important Cypraeidae specimen: One of the best specimens ever collected of the ultra rare. Only a handful of specimens of these heavy dark giants were ever found at this level of quality. Extra wide and heavy specimen with very ripples pattern! Good quality. Impossible to get now in this size. Pictures don't do this shell any justice. The white spots on the shell are from the camera.**
