

*Cypraea Alisonae* (Melvill, 1888). Location: North Shore, Oahu, HI. Grade: F+++/almost. Size: 23.3mm. Notes: This *Cypraea Alisonae* were self collected on Scuba on a night dive in 15ft on the bottom side of a huge crack in the main reef. It is very mature SUPERB spotting that wraps to the UPPER part of the shell, only issue is a slight flaw on the posterior upper part above the canal but does not take away from its beauty.
