

Cypraea spadicea, Great Rusty Color, 51.1mm, California Shell

This is a *Cypraea spadicea* that is 51.1mm in F+++ condition (has some marks on the dorsum that you can see but which are completely underneath the nacre).

- Great rusty color on the specimen.

Found in California on a wreck. Collection data provided with the shell. White spots on the shell are from the camera.
