

stercoraria
special color

Very few specimens such green in this collection! I
selected all the best,
so to give a chance to as many as possible collectors.

Hyperglossy cute specimen reddish, black with wide
broad apple green dorsal patches.
It is quite unusual keeping this brilliant algal green for so
many years, they were kept in the dark all this time! Very
very lovely.

Pointe Indienne Peninsula, French Congo, 90's
69 mm GEM
