

Cypraea Sulcidentata (J.E. Gray, 1824).

Location: N Shore, Oahu, HI

Grade: Gem Minus. Size:47.1mm.

Notes: This Cypraea Sulcidentata was self collected on night dive in 30ft way in a lava tube on the side of a medium sized boulder grazing. This Sulcidentata is MATURE, calloused margins as seen in all the pictures and just killer yellow teeth that only come in ONES just recently found, SUPERB condition, well banded, this one has it all, I personally could not see anything wrong with this one but put a minus just in case.
