

Cypraea Talparia Talpa (Linnaeus, 1758). Location: W Shore, Maui, HI
Grade: F+++/Gem. Size: 75.6mm. Notes: This is the only *Talpa* I found in Maui and was just cleaned out to give it that Fresh out of the Ocean look. It was found in 20ft on the side of a ledge in the open. If you look at the 2nd photo you can see a SUPERB marginal spotting pattern I have not see before in *Talpa*'s, it is in SUPERB condition, almost perfect base, nice mature SPECIMEN with EXTRA DARK COLOR, rich banded pattern, well rounded FAT specimen, only issues are very minor a few spots on the anterior top area 2 CM's up and a slight smudge on the base.
