

Tessellata that is 36.5mm and in F+ condition (has a line on the dorsum, the posterior end had been chipped and the shell naced it over, there is a dark mark near the anterior end of the dorsum).

- Excellent spots on this specimen.
- Very Large size.
- A nice looking shell in spite of the flaws.

Found on the island of Kauai, Hawaii. Endemic Hawaiian shell. Collection data provided with the shell. White spots on the shell are from the camera.
