

Tigris Schilderiana (White Tiger) (Cate, 1961). Location: E. Shore Oahu, HI. Grade: F+++/almost Size: 123.0mm. Notes: This Cypraea Tiger was self collected on a day dive in 30ft back in a lave tube sitting in the back on its floor. This Tigris is in really good condition, STRAIGHT MANTEL LINE that is really hard to get in Tigers, Amazing WHITE hue, perhaps one in a hundred or so I find it White, nice even spotting, very thick and heavy. I hope this will find its way into your collection as very few this SIZE come up in this condition, it does have some issues on the posterior/anterior area with slight micro micro spot over the shell.
