

*Zoila venusta roseopunctata roseoimmaculata*  
Raybaudi, 1985., 68.2mm. RARE COLOR FORM

- ENDEMIC of South West Australia
- Nice pink color with no any dots other than few algae spots developed due to age of shell.
- Super mature, heavy with interesting gerontic blistering on terminals visible on last photos.
- Gerontic super callused shell with perfectly developed base. F++.
- High creamy color callus.
- Shell is already faded been collected in 2006, no more color loss - very main thing for all *Zoila*.
- There are few algae marks on the back of shell visible on last photo
