

*Triplofusus giganteus*. It measures 158 mm. It is in fair to good condition. The "good" is the deep orange color, with lighter orange bands, plus the operculum. The "fair" part are the chips along the lip and a tiny nick at the spire. There are also a few injury repairs made by the animal. This shell was live collected by SCUBA at 70-130' off Panama City, Florida.
