

Cypraea (Afrozoila) murisimilis, Martin, 1879

FOSSIL (Miocen)!!! Black form! 54.1 mm

Indonesia. Black specimen. The color of these fossils depends on the conditions of the burial of the shell. Black color appears in the specimens that were buried in the volcanic rock. This color is not rare, but since the volcanic rock is a very aggressive environment, finding a shell in good quality with an even color is very difficult.
