

Bolinus cornutus, *Linnaeus, 1758*

Black form! VERY SPINY! 162.1 mm (longest size)

Senegal. F++/Gem. GIANT. SUPER specimen. Ultra long almost intact horns. This species catch into heavy nets, local fishermen do not collect shells specifically, so the Bolinus break out of the nets. Finding such specimen is a great success. Biggest size 162 mm (apex/canal size 151 mm)
