

Hexaplex kuesterianus

Tapparone-Canefri, C.E., 1875

Super black (80.3 mm) and white (72.2 mm) forms! Rare pair (both with operculums)! F++/Gem

Oman. Outstanding specimens! Black specimens are very rare, usually one black specimen is found at 50 with the regular pattern. Amazing colors combination. Exceptionally heavy and spiny form with clear black/white pattern and fantastic thick lip
