

Hexaplex kuesterianus, *Tapparone-Canefri, C.E., 1875*

BLACK form! Giant! Rare. 81.9 mm

Oman. Outstanding specimen! Black specimens are very rare, usually one black specimen is found at 50 with the regular pattern.

Amazing colors combination. Exceptionally heavy and spiny form with clear black/white pattern and fantastic thick lip.

Pictures don't do this shell any justice. The white spots on the shell are from the camera
