

HEXAPLEX KUESTERIANUS - SUPERB QUALITY SPECIMEN 76.1 mm

Quality: F+++/GEM I see no important flaws.

Collected: Collected by Russian collector partly burried in muddy sand in a rocky section at Masirah Island, Oman, January 2019.

Comments: Fantastic quality specimen. Super hard to find them this good. This specimen is found in sand in a rocky section. Specimen with longer spines are found in only sand. The rounded spines are found in rocky sections.
