

Langford BIG Hawaiian Sunrise Shell 34.6 mm
Excellent Jewelry Half

This BIG and beautiful upper half was recently found lying empty in deep-water off Oahu, Hawaii.

The shell was found buried in fine sand at the bottom of a deep-water cave. Note the dark green staining, which is likely the result of the shell being buried for a very long time.

The longest dimension (diagonal) is 34.6 mm, the right angle “height” is 31.8 mm. Measurements were made by dial caliper and rounded down to the nearest whole 10th of a millimeter
