

Pecten langfordi that is 27.0mm (maximum dimension). Sunrise shell.

- Beautiful bright red color and super pattern on the outside and with a dark and glossy inside.
- This is a whole, natural pair. One side is always the "yellow" and the other the "red".
- These hard to get deep water shells are highly prized both as specimen shells and for jewelry.
- The whole shells are always hard to get. This one has some wing damage and is chipped on one side by whatever predator ate it.

Found on the island of Oahu, Hawaii.
