

**Terebralia palustris**

**Origin:** N.W. Aust.

**Author:** Linnaeus 1767

**Size:** 137mm.

**Grade:** F3

15 €, Jul 2017

" *Northern Mud Creeper* " An excellent size piece. The apex are typically blunt broken or uncoiled on this species, as good as they come here. Outer lip & siphonal notch intact. The early whorls are unusually pale, they are typically dark.
