

SPONDYLUS AMERICANUS - MARTINIQUE 78/107 mm

Quality: NO RATING Impossible to rate a Spondylus but as you can see this is a specimen of the better quality. Please judge the photos. Size without and with spines respectively.

Collected: Collected by diver at 20 meters, off Le Marin, Martinique.

Comments: I have tried to clean this specimen with my ultrasonic needle as good as possible without bringing any of the spines in danger of breaking off.
