

SPONDYLUS ECHINATUS - SUPERB THAILAND 123 mm NO RATING - A4139

Quality: NO RATING A spondylus is hard to rate but this specimen is of super quality. The white spots on the spines on the photos are only reflection of the recently used oil.

Collected: Collected by gypsy diver at 15 to 20 meters on shallow reefs around Phuket Island, Thailand, 1980's.

Comments: We were able to buy an old stock of very selected specimens, collected more than 30 years ago. We are cleaning them one by one and the result is awesome. Super nice !!!
