

## **SPONDYLUS ALBIBARBATUS - PHILIPPINES +/- 73 mm**

Quality: NO RATING Impossible to rate a Spondylus but as you can see this is a specimen of the better quality. Please judge the photos. Size front to back without spines.

Collected: Collected by locals at various depths in the Visayas region, Philippines, 2017.

Comments: I have tried to clean this specimen with my ultrasonic needle as good as possible without bringing any of the spines in danger of breaking off.
