

## **SPONDYLUS BARBATUS - JAPAN 77/88 mm**

Quality: NO RATING Impossible to rate a Spondylus but as you can see this is a specimen of the better quality. Please judge the photos. Size without and with spines respectively.

Collected: Collected in lobster nets at 20 to 30 meters, off Minabe, Hidaka, Wakayama Prefecture, Japan.

Comments: I have tried to clean this specimen with my ultrasonic needle as good as possible without bringing any of the spines in danger of breaking off. Very hard to find Japanese specimens, especially in this outstanding quality.
