

***Bassina (Callanaitis) desjecta***

One of the most famous and sought after bivalve among collectors

Quite hard to get large specimens in such nice conditions! Colorful, curled lamellae with pale yellow jumbo and a pink-apricot shadow. Very hard supply now.

Collected in shallow water in sand & mud, Seven Mile Beach, between Smithton and Stanley, North Coast of Tasmania, Australia, 2016

61 mm F3/GEM

56 \$, Nov 2017
