

Protapes gallus (Gmelin, 1791) - DARK AND BANDED! ZIG-ZAG BEAUTIFUL SHELL PATTERN. These shells, when offered slightly orange, indicate that they have been subject to heat, and no longer retain their original colouration. This is a fresh collected specimen that I believe Bivalve collectors will appreciate.

Size: 42mm

Quality: Gem- (No observable flaws, but fresh dead)

Collecting Data: Singapore, 2017.

3 \$, Nov 2017
