

CYMBIOLA NOBILIS - NEW LOCATION DWARF POPULATION THAILAND 79.1 mm F+++/GEM

Quality: F+++/GEM I see no important flaws. This shell is not perfect, but out of the large number we've seen it belongs to the top 10%.

Collected: Collected in net at 10 to 20 meters on muddy bottom off the Nakonsrithammarat Province, Southern Thailand.

Comments: Great quality specimen from a new location with only dwarf specimens.
