

CYMBIOLA NOBILIS - PURPLE DWARF POPULATION THAILAND 91.4 mm

Quality: F+++/GEM I see no important flaws. But the lip is still young.

Collected: Collected by Gypsy diver at 10 to 20 meters on sand South of Koh Racha Yai Island, Thailand, October through December 2017.

Comments: Beautiful purple color pattern from a dwarf population. Between the coffee colored specimens there are some with purple color. See 2nd photo for the color difference with a small classic colored specimen.
