

Voluta musica

Linnaeus, 1758

Gorgeous dark pattern. Knobby! MEGA MONSTER! 97.5 mm!!! F++ (only small irregularity)

Venezuela. Giant! Hard to get *V.musica* a similar size (almost 10 cm). Very dark specimen with very clear pattern. Blue/gray, black, tones of brown color. Cream and pale yellowish aperture and lip with fantastic black marks. Pictures don't do this shell any justice. The white spots on the shell are from the camera.
