

***Voluta virescens*, Lightfoot 1786**

Super dark pattern. Knobby giant form! 90.1 mm mm F++/Gem
Colombia. Big! Very dark specimen with very clear pattern.
Blue/gray, black, tones of brown color. Cream and pale yellowish
aperture and very mature lip with fantastic black marks. It will be
a diamond for any collection! Pictures don't do this shell any
justice. The white spots on the shell are from the camera.
